

# ER Low Positive Breast Cancer

Grace Callagy  
Professor of Pathology NUI Galway  
Consultant Pathologist GUH

# Estrogen and Progesterone Receptor Testing in Breast Cancer: ASCO/CAP Guideline Update

J Clin Oncol 38. © 2020

Results (with validated ER IHC assay)		Interpreted as
0 – < 1% of nuclei positive		ER-negative
1-100% of nuclei positive	1-10% of nuclei positive	ER-Low-Positive
	>10% of nuclei positive	ER-Positive

Maximises number of patients  
for endocrine therapy

Underestimates number of patients for  
ER negative treatment strategies

100 µm

100  $\mu$ m

# ER Low Positive BC is Molecularly Heterogeneous

- ER mRNA level and the 'ER Gene Signature' comparable to ER negative BC ( $p = 0.226, 0.168$ ) and lower than in ER > 10% ( $p < 0.001$ )

*Iwamoto T, J Clin Oncol 2012*

- Encompasses all molecular intrinsic subtypes (PAM50 classifier)

*Cheang M Breast Cancer 2015*

# Clinico-Pathological Features of ER Low Positive BC similar to ER negative BC

	<1% (n=1,625)	p	1-9% (n=250)	≥10% (n=7,764)	p
Young age (mean, yrs)	<b>52</b>	ns	<b>52</b>	57	<0.0001
Clinical TNM II/III	<b>68</b>	0.04	<b>62</b>	44%	<0.0001
T size (cm)	<b>3</b>	ns	<b>3</b>	2	<0.0001
Nodal positive	<b>33%</b>	ns	<b>38%</b>	28%	0.003
Grade 3	<b>84%</b>	ns	<b>82%</b>	28%	0.001
HER2 positive	<b>29%</b>	ns	<b>28%</b>	13%	<0.0001
PR positive (>1%)	15%	<0.0001	<b>58%</b>	84%	<0.0001

# How do ER Low Positive BCs Respond to Endocrine Therapy?

---

Relevance of breast cancer hormone receptors and other factors to the efficacy of adjuvant tamoxifen: patient-level meta-analysis of randomised trials *Lancet* 2011; 378: 771-84  
*Early Breast Cancer Trialists' Collaborative Group (EBCTCG)\**

1/3<sup>rd</sup> reduction in recurrence at 10 years following 5 years tamoxifen with ER >10 fmol/mg (LBA)

# How do ER Low Positive BCs Respond to Endocrine Therapy?

Relevance of breast cancer hormone receptors and other factors to the efficacy of adjuvant tamoxifen: patient-level meta-analysis of randomised trials *Lancet* 2011; 378: 771-84  
*Early Breast Cancer Trialists' Collaborative Group (EBCTCG)\**

1/3<sup>rd</sup> reduction in recurrence at 10 years following 5 years tamoxifen with ER >10 fmol/mg (LBA)

**Estrogen Receptor Status by Immunohistochemistry Is Superior to the Ligand-Binding Assay for Predicting Response to Adjuvant Endocrine Therapy in Breast Cancer**

Jennet M. Harvey, Gary M. Clark, C. Kent Osborne, and D. Craig Allred

*J Clin Oncol* 17:1474-1481. © 1999

10 fmols/mg equivalent to ER Allred score 3, >1% positive cells (IHC)

Borderline ER-Positive Primary Breast Cancer Gains No Significant Survival Benefit From Endocrine Therapy: A Systematic Review and Meta-Analysis

Tong Chen, *Clinical Breast Cancer*, Vol. 18, No. 1, 1-8 © 2017

No significant survival gain for ER LP following ET (IHC)

# How does ER Low Positive BC Respond to NACT?

Retrospective study  
3,055 HER- negative BC treated with NACT  
171 (5.6%) ER Low Positive

**Likelihood of pCR for ER Low Positive is similar to ER negative BC**

(adj. OR 0.95, 95% CI 0.64-1.40, p=0.792)

**and better than for ER >10%**

(adj. OR 2.3, 95% CI 1.48-3.47, p<0.001)

**Optimal ER cut point to predict pCR was 9.5%**

(27% vs 7%; adj. OR 2.17, 95% CI 1.62-2.87, p <0.001)

## How Frequent are Germline Mutations in ER Low Positive BC?

	MD Anderson Genetic Counselling Service <i>Sanford RA, Cancer 2015</i>		Clinical Breast Cancer Care Project <i>Lovejoy LA, Genes 2021</i>	
	ER Low Positive HER2 Negative	TNBC	ER Low Positive HER2 Negative	TNBC
Number of Patients	314	238	56	222
Germline Mutations	36%	40%	16%	17%

*Similar Frequency of germline mutations  
in ER Low Positive HER2 Negative BC and TNBC*

# How Reliable is the ER Low Positive Category?

- Almost all discordance in ER reporting in the 1-10% range

*Reisenbichler E, Am J Clin Pathol 2013*

- Sampling is an issue: > 50% (23/39) of ER Low positive cases on NCB are negative on resection

*Muftah A, Histopathology 2017*

- Inconsistency with pre-analytic and analytic variables can result in weak ER staining

Controls are  
Critical

## QC Considerations for ER Low Positive BC

### **Attention to controls**

Re-testing on same, alternative or resection block

Correlation with tumour type and grade

Comparison with previous pathology

(Image analysis, if validated)

## ER Low Positive BC

- Exhibits biological and behavioural differences compared to ER >10% BC and many similarities to ER negative BC
- Response to endocrine therapy is uncertain but remains possible
- Although categorised as ER positive, ER negative treatment options should be considered
- No consensus on the ancillary tests that might aid treatment decisions
- Close attention to QC is important

Thank you for your attention
